POOL LINERS

The finishing touch!

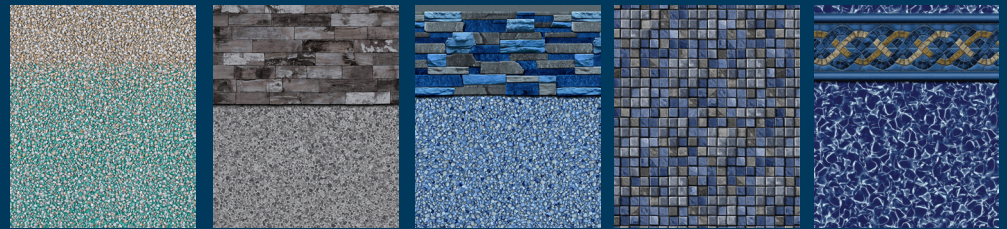

Our liners are chosen according to the highest industry standards. Installation is a meticulous job best left to professionals. Stop by your local SIMA dealer to see all the designs available.

AquaFab

AquaFab is known for its premium quality vinyl for both the walls and the bottom. Each liner undergoes a rigorous quality control process that guarantees an exceptional product.

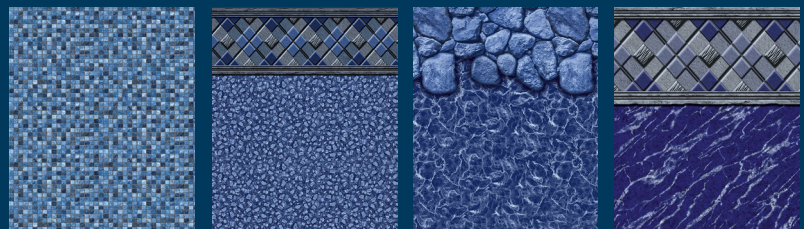

Kali Zephir Summer Blue Lakota

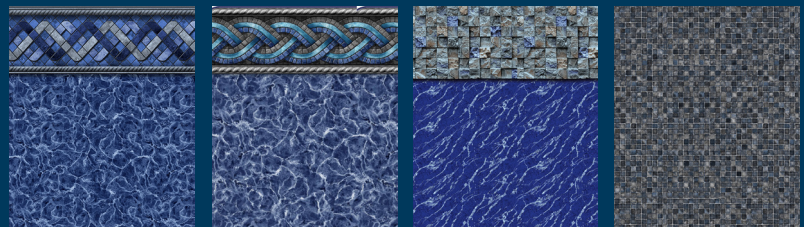

Fidji Island Nyx Maia Rhythm Cambridge

Our liners are designed to withstand harsh climates and manufactured with the latest assembly technologies to ensure a precise fit.

Cubic Iconic Inspire Monarch

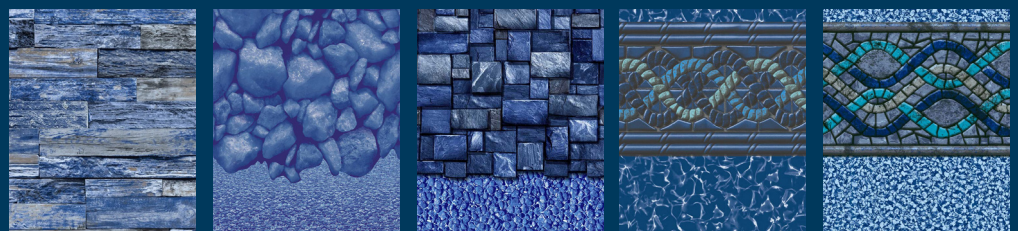

Nexus Roma Soho Tilex

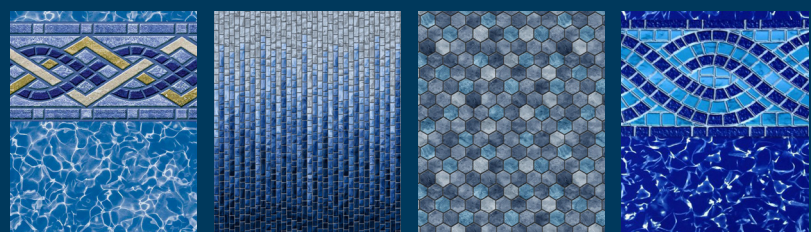

latham

Ultra Seam technology

Most liners have visible joints along the ground that don't always look so great. Our exclusive manufacturing process allows for stronger joints that are practically invisible.

Brighton St. Paul Street Travertine Hex Willow Creek

FILTRATION

Cartridge filters

These compact, energy-efficient systems are designed to remove solid suspended particles from pool water. They feature top-performing technology commonly used in residential filtration systems. Cleaning does not require a backwash. In other words, you save on water treatment chemicals and heating costs.

Sand filtration

The pump allows water to flow throughout the pool and to go through the filtration system. The sand (natural stone and glass can also serve as filter materials) retains dirt to make the water cleaner.

PUMPS

The pump plays a vital role in renewing your pool water as it pushes the water through the filter. Make sure to pick the right one!

1S 1-speed pumps

They are the most economical to purchase and offer performance year after year.

2S 2-speed pumps

These pumps run on high or low speed. Also, they are quiet and allow for energy savings of up to 70%.

PG Programmable 2-speed pumps

Digital controls allow you to program the pump so that it switches between high and low speed during the day.

HEATING

Heat pumps allow you to extend your pool season from earlier in the spring to later in the fall. You're able to get the most out of your summer! Among all types of heating system, heat pumps are the most energy efficient as they consume only a little bit of energy to produce heat.

Even more with the INVERTER technology

Quiet and energy efficient, heat pumps with INVERTER technology (also known as variable speed) maintain an ideal water temperature while ensuring 50% higher energy efficient than traditional heat pumps.

When turned on, they start from zero and gradually increase to a higher speed. This produces a stable current and reduces energy consumption. These heat pumps are also designed to work in low temperatures.

Stairs

The wide surface of each step and the railing make getting in and out of the pool a breeze. What's more, steps are great for sitting down, relaxing and keeping an eye on the children.

Stairs

PURIFICATION

Salt water chlorine generator

Simple and efficient, generators work by electrolysis, breaking down the salt in the water into chlorine and sodium. This ensures the daily purification of your pool water.

SOLAR BLANKET

In addition to keeping the heat, solar liners limit water evaporation and reduce the need for chemicals.

WINTER COVER

Made of UV high density polyethylene, winter covers are lightweight, easy to handle and install. They extend life of the printed pool liner.
